## Education

- Doctor of Philosophy** - Computing Science Expected: 2023  
Simon Fraser University, Burnaby, BC, Canada
- Masters of Science** - Computing Science (CGPA: **3.8/4**) August 2019  
Simon Fraser University, Burnaby, BC, Canada
- Bachelors of Science** - Electrical Engineering (CGPA: **18.00/20**) July 2017  
University of Tehran, Tehran, Iran

## Research Interests

**Multimedia Forensics, Computer Vision, Image Processing, Machine Learning, Deep Learning, Remote Sensing, Hyperspectral Imaging**

## Experience

- Network Systems Lab**, Simon Fraser University — supervised by: Prof. M Hefeeda  
- *Research Assistant* Sept. 2017 – Now
- This is an ongoing research. We are trying to find techniques to combat anti-forensics methods trying to authenticate deepfakes or tampered images. Forensics and anti-forensics is a two player game; one side tries to detect tampered images, the other attempts to falsify the classification system.
  - We designed a make up removal/detection system using generative adversarial networks. We showed that using shortwave infrared (SWIR) images, adding multiple loss terms to the objective function, and changing the structure of generator and discriminator improve the quality of the generated images and as a result, the accuracy of the makeup detection system.
  - We designed and implemented a method to dynamically prioritize the transmission of various components of hyperspectral data based on the application needs, the level of details required, and available bandwidth. Our method jointly and optimally selected the spectral bands and their qualities to maximize the utility of the transmitted data. It also enabled adaptive and progressive transmission of hyperspectral data. We used ResNet for the processing core of the design.
- Mobile Communication Systems Lab**, University of Tehran — supervised by: Prof. F Lahouti  
- *Undergraduate Research Assistant* Feb. 2016 – Sept. 2016
- We design and tested a state-of-the-art coded slotted ALOHA called irregular repetition slotted ALOHA (IRSA) on universal software radio peripherals (USRPs). To test its usability, we managed to use three USRPs, one as a receiver, and two as transmitter. Then, we tested a simple version of the IRSA on them.

## Selected Academic Projects

- A set of machine learning projects in the statistical machine learning course**
- *Statistical Machine Learning* — instructed by: Maxwell Libbrecht — grade:  $A^-$
- Parameter learning for Naive Bayes Classifier (NBC)
  - Gibbs sampling for image restoration
  - Design algorithms for reliable communication in the presence of noise using loopy belief propagation
- A set of image processing projects in the computational vision course**
- *Computational Vision* — instructed by: Yasutaka Furukawa — grade:  $A^+$
- Image filtering and Hough transform: In this project, we implemented some basic image processing algorithms and put them together to build a Hough Transform based line detector.
  - Augmented reality with planar homographies: Here, we implemented an AR application step by step using planar homographies.
  - 3D reconstruction: sparse and dense reconstruction
  - Scene recognition with Bag-of-Words
  - Digit recognition using CNN
  - Scene recognition using deep learning
- Entropy Minimization for Shadow Removal**
- *Illumination in Images and Videos* — instructed by: Mark Drew — grade:  $A^-$
- we first form an intrinsic reflectivity image based on assumptions of Lambertian reflectance, planckian lighting and fairly narrow-band camera sensors.

- Then, We find the angle for an invariant direction in a log-chromaticity space.
- After that, We show that the correct projection is that which minimizes entropy in the resulting invariant image.
- Finally, we use re-integration to recover the fully colored shadow-free image.

### Implementation of a Social Network in C++

- *Advanced Programming* — grade: 19.97/20

- Final project of Advanced Programming course. In groups of two students, we designed a social network system similar to LinkedIn.com using C++, Qt, and HTML5.

## Publications

M. Arab, P. Azadi, and M. Hefeeda, **Revealing True Identity: Detecting Makeup Attacks in Face-based Biometric Systems**, in Proc. of ACM Multimedia Conference (ACMMM'20), Seattle, WA, USA, October 2020.

M. Arab, K. Calagari, and M. Hefeeda, **Band and Quality Selection for Efficient Transmission of Hyperspectral Images**, in Proc. of ACM Multimedia Conference (ACMMM'19), Nice, France, October 2019.

## Skills

*Programming:* MATLAB/Simulink, Python [Tensorflow, PyTorch], and C/C++

## Honors and Awards

- Graduate Fellowship at SFU— Sept. 2020
- Graduate Fellowship at SFU— Sept. 2019
- Graduate Fellowship at SFU— Jan. 2018
- Ranked 14th among 150 more than 150 electrical engineering students and exempted from university graduate entrance exam — Sept. 2016
- Ranked 198th among more than 250000 in university entrance exam (Konkour) — June 2012

## Activities

- Student Representative at ECE student council — treasurer (2015)
- Volunteered at the Open Day of University of Tehran (2014)
